QUESTIONS

LEVEL 3 — HARD

Q1
function

Q2
functionsandpointers

2 / 2 saved

Level 3 — Hard **transpose (H)** — function

Write a function void transposeMatrix(int matrix[][10], int transposed[][10], int rows, int cols) that calculates the transpose of a given matrix.

Sample Input:

Enter rows and columns of the matrix: 2 3

Enter elements of the matrix:

1 2 3

1	2	3
4	5	6

Sample Output:

Transposed matrix is:

14

25

3 6

Your Code

```
1 #include <stdio.h>
2 void transposeMatrix(int matrix[][10], int transposed[][10]
3     int i, j;
```

Program Input (stdin)

Enter input if required...

Level 3 — Hard

vector (H) — functionsandpointers

Write a function `int dotProduct(int *vec1, int *vec2, int n)` that calculates the dot product of two vectors using pointers.

Sample Input:

Enter the size of the vectors: 3

Enter elements of first vector: 1 2 3

Enter elements of second vector: 4 5 6

Sample Output:

Dot product is 32

Your Code

```
1 #include <stdio.h>
2 int dotProduct(int *vec1, int *vec2, int n) {
3     int result = 0;
4     for (int i = 0; i < n; i++) {
5         result += *(vec1 + i) * *(vec2 + i);
6     }
7     return result;
8 }
```

Program Input (stdin)

Enter input if required...

Output

35°C Mostly sunny
